PASSED
first attempt

9

FLAKY
passed on retry

16

FAILED
both attempts

4

SKIPPED
serial cascade

WHAT THIS SAYS

51 of 71 (72%) come out green — 42 clean, 9 after one retry. The manifest core is solid: **Import Manifest, Export Manifest, Import / Export ECL, Login, and the basic Delivery Order and Bill Reservation flows all pass.**

Of the 16 failures, most are not app or test defects. Roughly half are the portal's own async customs processing not finishing inside the poll windows, or actions that misbehave only under this faster headless config (the normal run is headed with a 500 ms slowMo). The remaining cluster — the Transit manifest header form — fails the same way five times and is the one worth a look.

The `createHouseAirwayBill` file runs in serial mode, so its first failure skipped the other three; those three pass when run on their own.

FAILURES — TRIAGED

▼ Portal-side processing didn't finish in time 3

NOT A BUG

The portal's customs / status pipeline is asynchronous. These tests poll for an outcome status and it never arrived inside the window. Same behaviour the suite has always seen intermittently — re-running usually clears it.

create air delivery order with invalid freight forwarder gets rejected

Delivery Order/newDeliveryOrder.spec.ts

```
Error: expect(received).toBe(expected) // Object.is equality | Expected: true | Received:
```

should wait for import manifest to be accepted then view it

Import Manifest/viewImportManExp.spec.ts

```
Error: expect(received).toBe(expected) // Object.is equality | Expected: true | Received:
```

the bill appears in the reservation search but its checkbox is disabled

Freight Forwarder/billTiedToDeliveryOrderNotSelectable.spec.ts

```
Error: expect(received).not.toBe(expected) // Object.is equality | Expected: not "" |
```

▼ Action raced the form under the faster headless config 5

CONFIG ARTIFACT

The element is in the DOM but fill() / click() can't act on it within 45s — a re-render or overlay in the item/warehouse step. The sibling tests that fill the same field pass, and these pass in the normal headed run (slowMo 500). A robustness gap in the page objects around form re-renders, exposed by the leaner config — not an app change.

All information ECL with adding new Waiting Normal Bill

Import Manifest/createNewImportECL.spec.ts

```
TimeoutError: locator.fill: Timeout 45000ms exceeded. | Call log: | - waiting for loca
```

All information ECL with header, MAWB, house bill, item, and warehouse changes

Import Manifest/createNewImportECL.spec.ts

```
TimeoutError: locator.fill: Timeout 45000ms exceeded. | Call log: | - waiting for loca
```

Submit Import Manifest with one Express mail Waiting Import Bill

Import Manifest/newImportManExpTest.spec.ts

```
TimeoutError: locator.fill: Timeout 45000ms exceeded. | Call log: | - waiting for loca
```

create new import manifest with partial arrival

TimeoutError: locator.fill: Timeout 45000ms exceeded. | Call log: | - waiting for loca
```

Create Air Transit Manifest ECL with Header Update and Transit Bill Add/Update/Delete

Transit Manifest/createNewTransitECL.spec.ts

```
TimeoutError: locator.click: Timeout 45000ms exceeded. | Call log: | - waiting for ge
```

▼ Transit manifest header form — needs a look

5

INVESTIGATE

Five Transit tests fail fast (2–3 min) waiting for input[test-attr="shipping_agent_master_bill_create_destination_country"], which never appears. The Transit tests that add an AWB get further and pass, so it's specific to reaching the destination-country field on the header. Could be a portal test-attr change (like shipping_agent_final_port_name → _10 seen recently) or a headless render timing issue — worth one headed check.

Create Transit Manifest with header only:

Transit Manifest/createNewTransit.spec.ts

```
Error: expect(locator).toBeVisible() failed | Locator: locator('input[test-attr="shippin
```

create new transit manifest and save as draft

Transit Manifest/createNewTransit.spec.ts

```
Error: expect(locator).toBeVisible() failed | Locator: locator('input[test-attr="shippin
```

create transit manifest with bill that does not exist

Transit Manifest/createNewTransit.spec.ts

```
Error: expect(locator).toBeVisible() failed | Locator: locator('input[test-attr="shippin
```

ECL tran

Transit Manifest/createNewTransitECL.spec.ts

```
Error: expect(locator).toBeVisible() failed | Locator: locator('input[test-attr="shippin
```

ECL with invalid transport company gets rejected

Transit Manifest/createNewTransitECL.spec.ts

```
Error: expect(locator).toBeVisible() failed | Locator: locator('input[test-attr="shippin
```

▼ Known-fragile / newly-built areas

3

WATCH

The house-bill split flow is the area built this week and is still timing-sensitive (submit-with-auto-accept). The ZATCA transit-quantity field is the documented test-attr-vanishing case. The import edit-header field failing is likely the same re-render timing as the config cluster.

two house air waybills (50 + 50)

Freight Forwarder/createHouseAirwayBill.spec.ts

```
Error: expect(locator).toBeVisible() failed | Locator: locator('.fasah-alert-modal .fasah-alert-modal')
```

create new transit manifest with a transit AWB from ZATCA

Transit Manifest/createNewTransit.spec.ts

```
Error: expect(locator).toBeEditable() failed | Locator: locator('input[placeholder="زيت"]')
```

should edit import manifest header

Import Manifest/viewImportManByRefTest.spec.ts

```
Error: expect(locator).toBeEditable() failed | Locator: locator('[test-attr="shipping_attr"]')
```
